

NEVER SETTLE WHEN IT COMES TO YOUR SAFETY

The BERAL CV rotor range is covering most of the popular vehicles on the road
All high quality references have **high-end materials & design** and are aligned to the **latest technologies**.

- Over 83% EMEA parc coverage*
- **Flexible, customer-oriented solutions**
- **Reliability** linked to Federal-Mogul Motorparts' **Full Braking Program**

PARTS SUITED FOR A WIDE RANGE OF APPLICATIONS

*Car parc coverage according to Tecdoc data and Headline

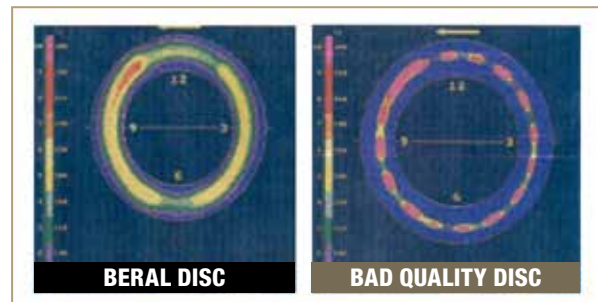

CUTTING-EDGE TECHNOLOGY

Balanced Rotor - balance of each disc is checked at the end of the machining process and, if it is out of specified tolerance, a portion of metal is milled out from the outside diameter of the disc bringing the balance within the design specifications. This operation avoids the risk of vibration during high speed driving.

Advanced Pillar Venting Technology - for a better, more uniform thermal dispersion. Creating cooler rotors & improved braking performance.

CRACK TEST

COMPETITOR

BERAL

COMPETITOR

BERAL

Our customers can benefit from our BERAL® offer selected brake rotors chosen after extensive testing** to make sure optimal performance in all situations.

** All tests were performed in an internal lab under OE standards. This includes a total of 500 stops per rotor. Full test D-2567 report will be provided upon request: info@fmmotorparts.eu
