## Use our know-how to hone your skills

With each diagnosis, each revision, your engine expertise becomes richer. Your skills get broader and deeper. And it's just the same at Federal-Mogul. That's why people rely on you. For example, your eye for detail and your feel for precise cylinder liner honing guarantee optimum engine performance. Your expertise helps us understand which parts you need, and how we can give you even more support to make it easier for you to achieve perfection with each engine job.

**Because our engine expertise... is based on yours.**

# Keep it real. Keep out counterfeit.

The authenticity of all our engine and sealing products is protected by the MAPP Code (Manufacturers Against Product Piracy) and the PrioSpot® Authentication device, featured on a special Anti-Counterfeit label on the packaging. In this way you can be sure of our trusted Federal-Mogul quality!

## How to check the authenticity of your products

### 1 - Check if the packaging is closed and the label is intact

### 2 - Verify the unique alphanumeric code and data matrix code

- Type in the alphanumeric code at [www.fmecat.eu](http://www.fmecat.eu)
- or
- Read the Data Matrix Code with a 2-D scanner
- or
- Read the Data Matrix Code on your smartphone with a barcode reader app

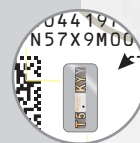

### 3 - Verify the unique security code on the PrioSpot® Label

- Different code on each packaging

- Code contains the last 4 digits of the alphanumeric code
- The code and the Federal-Mogul logo shimmer in rainbow colours only in direct light
- Only in direct light a digit, repeating the last digit of the security code, is visible. This digit will move up and down when you change the angle of the PrioSpot®

## PISTON RINGS FUNCTION & REQUIREMENTS

The primary function of the piston rings is to provide a seal: to ensure that the heat and pressure generated during the combustion process remain in the combustion chamber and that oil does not pass into the combustion chamber. In addition, the ring must also transfer the heat away from the piston and regulate the lubrication process.

### DESIGN OF GOETZE NORMFORM REPLACEMENT PISTON RINGS

GOETZE piston rings are installed as Original Equipment for internal combustion engines and compressors on production lines throughout the world. Continuous collaboration with the design and test departments of virtually every engine and vehicle manufacturer, and development work and tests performed in our own test laboratories, provide a comprehensive knowledge that can be utilized for almost all engines. This know-how and decades of experience with replacement piston rings are the basis of the individual design of every replacement ring set.

The design is fundamentally based on the piston ring materials and running face coatings that have proven themselves in Original Equipment applications.

### GENERALLY THE RING PACK CONSISTS OF THREE RINGS:

1. Top Compression ring – often manufactured from steel, ductile iron and cast iron, these rings seal the air / fuel mixture in the combustion chamber.
2. Second Compression ring – generally manufactured from ductile iron and cast iron, these are dual function rings in that they combine the role of a compression ring with that of the oil control ring.
3. Oil Control ring – can be manufactured from ductile iron and cast iron, however, steel is used on multi-piece rings, these regulate the amount of oil required to lubricate the top and second rings.

### TRENDS IN PISTON RING TECHNOLOGY

4. Reduction in ring width – due to smaller engines with lighter pistons and shorter compression heights.
5. Reduction in ring weight – for enhanced high RPM and stability.
6. Reduction in ring tension – due to the requirement to reduce frictional losses.
7. Ring metallurgy – the trend is toward high strength alloys such as ductile iron and steel in order to withstand higher temperatures due to leaner fuel mixtures and higher ring placement on the piston for reduced emissions.

## RUNNING FACE COATINGS

### CHROME PLATING, CR

The electrodeposited hard chrome coating combines excellent wear resistance with high resistance to scuffing. This accounts for the superiority of chromed rings to uncoated rings and surface treated rings.

### MOLYBDENUM COATING, MOL, MO

To avoid scuffing the periphery of the ring is coated with Molybdenum, a process that has yielded excellent results. Molybdenum has a very high melting point (2620°C) and good thermal conductivity, factors which account for the high resistance to scuffing and scoring.

### PLASMA SPRAY COATING, PS

Plasma spray coatings, which possess high wear, scuff and breakout resistance and high inherent strength, while causing only limited cylinder wear, are today used very successfully in production.

### PHOSPHATING, P

The process is employed to speed up and improve bedding-in of the rings. The surface of the ring is transformed by chemical treatment to phosphate crystals.

### NITRIDING, NT

Surface treatment by Nitriding to reduce wear of steel compression rings and steel rails in oil control rings.

### CHROMIUM-CERAMIC COATING, CK

The CK coating withstands higher thermal and mechanical loading than existing chromium, molybdenum and plasma coatings, though these tried and tested coatings lose none of their significance.

### GOETZE DIAMOND-REINFORCED RING COATING, GDC

Ultra-fine diamonds with material specific, hybrid properties and nanometer dimensions, are embedded into the hard chromium running surface. The GDC ring running surface has lower ring wear rates and a considerably higher scuff resistance when compared to other coatings.

# PISTON RING FITTING INSTRUCTIONS - EN

## PISTON RING FITTING INSTRUCTIONS

Prior to fitting Goetze replacement piston rings, the piston ring grooves must be cleaned taking special care not to damage the groove root radius or side walls. The maximum axial clearance for gasoline engines is 0.13mm and for diesel pistons is 0.20mm. Pistons with defective ring grooves or excessive axial wear should always be replaced by Nüral replacement pistons.

## COMPRESSION RINGS

Piston rings should be installed using piston ring pliers taking care not to stretch open the ring more than necessary. Excessive stretching can damage the ring, cause deformation and possibly lead to breakage during operation.

During assembly special attention must be made to the TOP marking which should always face towards the piston crown. All Goetze compression rings will have the manufacturers mark "GOE" and we recommend that all rings, including those without TOP marking are fitted with marked side facing the piston crown.

## GOETZE VF 3-PIECE OIL RINGS

Only the Goetze VF 3-piece oil control rings are not marked as all three elements can be installed without orientation.

Fit the expander to the groove first taking care that the joint is not positioned over slots or holes in the base of the ring groove.

While holding the ends of the expander together, the top steel rail should be wound into the groove starting at about 45°- 90° to the left of the expander joint working in the direction of the joint.

The bottom rail should be fitted at 45°- 90° to the right of the joint working in the direction of the joint.

To ensure the rings bed-in properly after engine re-conditioning, we recommend running the engine for about 500 to 1000 km and then changing the oil.

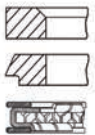

## CHECKING FITMENT OF RINGS

After the rings have been installed on the piston check that they are free to rotate within the ring grooves. The rings should then be positioned with the ring gaps at intervals of 120°.

**NB. Chromium plated rings should not be fitted to cylinders with Chromium plated bores.**

## FUNKTION UND ERFORDERNISSE VON KOLBENRINGEN

**Die primäre Funktion von Kolbenringen ist die Abdichtung: Sie sorgen dafür, dass die im Verbrennungsprozess erzeugte Wärme und der Druck in Verbrennungsraum verbleiben und kein Öl in den Verbrennungsraum eintritt. Der Kolbenring hat außerdem die Aufgabe, die Wärme vom Kolben abzuleiten und den Schmierungsvorgang zu regeln.**

### KONSTRUKTION DER GOETZE NORMFORM AUSTAUSCHKOLBENRINGE

Die GOETZE Kolbenringe werden weltweit als OE für Verbrennungsmotoren und Kompressoren in Fertigungsstraßen installiert.

Durch kontinuierliche Zusammenarbeit mit den Konstruktions- und Testabteilungen nahezu aller Motor- und Fahrzeughersteller sowie Entwicklungsarbeiten und Tests in unseren eigenen Prüflaboren verfügen wir über umfangreiches Wissen, das für fast alle Motoren genutzt werden kann. Dieses Know-how und jahrzehntelange Erfahrung mit Austauschkolbenringen bilden die Basis der individuellen Konstruktion jedes Austauschringsatzes.

Die Konstruktion basiert grundsätzlich auf Kolbenringmaterialien und Laufflächenbeschichtungen, die sich in OE-Anwendungen bewährt haben.

### EINE RINGPACKUNG BESTEHT GRUNDSÄTZLICH AUS DREI RINGEN:

1. Oberer Verdichtungsring – diese Ringe, die häufig aus Stahl, duktilem Eisen und Gusseisen gefertigt sind, dichten die Luft-/Kraftstoffmischung im Verbrennungsraum ab.
2. Zweiter Verdichtungsring – diese Ringe sind generell aus duktilem Eisen und Gusseisen gefertigt und haben eine Doppelfunktion: Sie kombinieren die Aufgabe eines Verdichtungsringes mit dem eines Ölabbstreifings.
3. Ölabbstreifring – kann aus duktilem Eisen und Gusseisen gefertigt sein, bei mehrteiligen Ringen wird jedoch Stahl verwendet. Diese regulieren die zur Schmierung des oberen und zweiten Rings nötige Ölmenge.

### TRENDS IN DER KOLBENRINGTECHNOLOGIE

4. Reduzierte Ringbreite – aufgrund kleinerer Motoren mit leichteren Kolben und kürzeren Verdichtungshöhen.
5. Reduziertes Ringgewicht – für bessere Leistung bei hoher Drehzahl und mehr Stabilität
6. Reduzierte Ringspannung – aufgrund der erforderlichen Reduzierung von Reibungsverlusten.
7. Ringmetallurgie – der Trend geht hin zu hochfesten Legierungen wie z.B. duktilem Eisen und Stahl, um höheren Temperaturen standzuhalten, die dank magerer Kraftstoffmischungen und höherer Positionierung auf dem Kolben zur Abgasreduzierung vorhanden sind.

## LAUFFLÄCHEN-BESCHICHTUNGEN

### VERCHROMEN, CR

Die galvanische Hartchrombeschichtung kombiniert ausgezeichnete Verschleißfestigkeit mit hoher Reibfestigkeit. Das macht verchromte Ringe den unbeschichteten Ringen und oberflächenbehandelten Ringen überlegen.

### MOLYBDÄNBESCHICHTUNG, MOL, MO

Um Abrieb zu verhindern, ist die Peripherie des Ringes mit Molybdän beschichtet: Ein Verfahren, mit dem ausgezeichnete Ergebnisse erzielt werden. Molybdän hat einen sehr hohen Schmelzpunkt (2620°C) und gute Wärmeleitfähigkeit, beides Faktoren die zur hohen Reib- und Kerbfestigkeit beitragen.

### PLASMA-SPRITZBESCHICHTUNG, PS

Plasma-Spritzbeschichtungen weisen hohe Verschleiß-, Reib- und Ausbruchfestigkeit sowie hohe Eigenfestigkeit auf, verursachen nur eingeschränkten Zylinderverschleiß und werden heute mit großem Erfolg in der Produktion eingesetzt.

### PHOSPHATIEREN, P

Mit diesem Verfahren wird der Einlauf der Ringe beschleunigt und verbessert. Die Ringoberfläche wird dabei durch chemische Behandlung in Phosphatkristalle umgewandelt.

### NITRIEREN, NT

Eine Oberflächenbehandlung durch Nitrieren reduziert den Verschleiß von Stahlverdichtungsringen und Stahlrails in Ölabbstreifungen.

### CHROM-KERAMIK-BESCHICHTUNG, CK

Die CK-Beschichtung weist höheren Widerstand gegen thermische und mechanische Belastungen auf als bestehende Chrom-, Molybdän- und Plasmabeschichtungen. Diese bewährten Beschichtungen haben jedoch nichts von ihrer Bedeutung eingebüßt.

### GOETZE DIAMANT-RINGVERSTÄRKUNGSBESCHICHTUNG, GDC

Dabei werden ultrafeine Diamanten im Nanometerbereich mit materialspezifischen, hybridischen Eigenschaften in die hartverchromte Lauffläche eingebettet. Eine GDC-beschichtete Ringlauffläche weist im Vergleich mit Laufflächen mit anderen Beschichtungen niedrigere Ringverschleißraten und eine bedeutend höhere Reibfestigkeit auf.

# MONTAGEANLEITUNGEN FÜR KOLBENRINGE - DE

## MONTAGEANLEITUNGEN FÜR KOLBENRINGE

Vor der Montage von Goetze Austauschkolbenringen müssen die Kolbenringnuten gereinigt werden. Dabei muss besonders darauf geachtet werden, dass der Nutgrundradius oder die Seitenwände nicht beschädigt werden. Das maximale Axialspiel für Benzinmotoren beträgt 0,13mm und für Dieselkolben 0,20mm. Kolben mit defekten Ringnuten oder übermäßigem Axialspiel sollten grundsätzlich durch Nüral Austauschkolben ersetzt werden.

## VERDICHTUNGSRINGE

Kolbenringe sollten nur mit Kolbenringzangen montiert werden, und es muss darauf geachtet werden, dass der Ring nicht unnötig gedehnt wird. Übermäßiges Dehnen kann den Ring schädigen, Verformung verursachen und möglicherweise zum Bruch während des Betriebs führen.

Beim Zusammenbau muss speziell darauf geachtet werden, dass die Markierung OBEN (TOP) immer in Richtung Kolbenboden zeigt. Alle Goetze Verdichtungsringe tragen die Herstellerkennzeichnung "GOE", und wir empfehlen, dass alle Ringe (auch solche ohne die Markierung TOP) mit der markierten Seite in Richtung Kolbenboden zeigend montiert werden.

## GOETZE VF 3-TEILIGE ÖLABSTREIFRINGE

Nur die Goetze VF 3-teiligen Ölabstreifringe sind unmarkiert, da alle drei Bestandteile ohne Ausrichtung montiert werden können. Zuerst den Expander in die Nut einpassen, dabei darauf achten, dass der Stoß nicht über Schlitz oder Löchern in der Basis der Ringnut positioniert wird.

Während die Enden des Expanders zusammengehalten werden, sollte die oberste Lamelle in die Nut gedreht werden. Dabei bei etwa 45° - 90° links vom Expanderstoß beginnen und in Richtung Stoß arbeiten.

Die untere Lamelle sollte bei 45° - 90° rechts vom Stoß montiert werden. Dabei in Richtung Stoß arbeiten.

Um für einen korrekten Einlauf der Ringe nach Aufarbeitung des Motors zu sorgen, empfehlen wir, den Motor etwa 500 bis 1000 km zu fahren und danach das Öl zu wechseln.

## SITZ DER RINGE PRÜFEN

Nach Montage der Ringe am Kolben prüfen, dass sie sich unbehindert in den Ringnuten drehen können. Die Ringe dann mit den Ringspalten in Abständen von 120° positionieren

**Verchromte Ringe dürfen nicht in Zylinder mit verchromten Bohrungen montiert werden.**

## SEGMENTS DE PISTON : FONCTION ET BESOINS

La fonction principale des segments de piston est d'assurer l'étanchéité : les segments veillent à ce que la chaleur et la pression produites lors du processus de combustion demeurent dans la chambre de combustion et à ce que l'huile ne pénètre pas dans cette dernière. De plus, le segment doit également assurer le transfert de la chaleur emmagasinée par le piston et réguler le processus de lubrification.

### CONCEPTION DES SEGMENTS DE PISTON DE RECHANGE GOETZE NORMFORM

Les segments de piston GOETZE sont montés d'origine sur des moteurs à combustion interne et des compresseurs produits dans le monde entier. La collaboration permanente avec les services d'études et d'essais de la quasi-totalité des constructeurs automobiles et des motoristes, ainsi que les travaux de mise au point et les tests réalisés au sein de nos propres laboratoires d'essai, nous permettent d'acquérir des connaissances approfondies qui peuvent être exploitées sur presque tous les moteurs. La conception propre de chaque jeu de segments de rechange repose sur ce savoir-faire ainsi que sur des décennies d'expérience dans les segments de piston de deuxième monte. Leur conception est essentiellement basée sur des matériaux de segments de piston et des revêtements de surfaces de glissement qui ont fait leurs preuves en première monte.

### EN RÈGLE GÉNÉRALE, LE PISTON EST MUNI DE TROIS SEGMENTS :

1. Le segment de feu : le plus souvent réalisé en acier, en fonte ou en fonte ductile, ces segments assurent l'étanchéité du mélange air-carburant dans la chambre de combustion.
2. Le second segment (ou segment d'étanchéité) : généralement réalisés en fonte ou en fonte ductile, ces segments à double fonction jouent le rôle à la fois de segment de compression et de segment racler d'huile.
3. Le segment racler : notamment en fonte ou en fonte ductile, ou encore en acier pour les segments en plusieurs parties, ce segment régule la quantité d'huile nécessaire pour lubrifier le segment de feu et le segment d'étanchéité.

### LES TENDANCES DANS LE DOMAINE DES TECHNOLOGIES DE SEGMENTS DE PISTON

4. Réduction de la largeur des segments : du fait de moteurs plus petits avec des pistons plus légers et des hauteurs de compression inférieures.
5. Réduction du poids des segments : pour une puissance à haut régime et une stabilité accrues.
6. Réduction de la tension des segments : du fait de la nécessité de diminuer les pertes par frottement.
7. Composition métallurgique des segments : la tendance est aux alliages à haute résistance, tels que la fonte ductile et l'acier, afin de supporter des températures plus élevées engendrées par des mélanges de carburant plus pauvres et un positionnement plus haut des segments sur le piston visant à réduire les émissions polluantes.

## REVÊTEMENTS DES SURFACES DE GLISSEMENT

### CHROMAGE (CR)

Ce revêtement en chrome dur déposé par électrolyse allie une excellente tenue à l'usure à une résistance élevée au frottement. Cela explique la supériorité des segments chromés par rapport aux segments non revêtus et aux segments traités en surface.

### REVÊTEMENT DE MOLYBDÈNE (MOL, MO)

Un procédé qui donne d'excellents résultats consiste à revêtir le pourtour du segment avec du molybdène afin d'éviter l'usure par frottement. Le molybdène présente un point de fusion très élevé (2620°C) et une bonne conductivité thermique, des facteurs qui contribuent à l'accroissement de la résistance au frottement et au rayage.

### REVÊTEMENT PAR PROJECTION PLASMA (PS)

Aujourd'hui utilisés avec grand succès en production, les revêtements par projection plasma possèdent une résistance élevée à l'usure, au frottement et à la rupture ainsi qu'une grande robustesse intrinsèque. Ils occasionnent seulement une usure limitée du cylindre.

### PHOSPHATATION (P)

Ce procédé est employé pour accélérer et améliorer le rodage des segments. La surface du segment est convertie par traitement chimique en cristaux de phosphate.

### NITRURATION (NT)

Un traitement de surface par nitruration permet de réduire l'usure des segments de compression en acier et des rails d'acier des segments racleurs d'huile.

### REVÊTEMENT CHROME-CÉRAMIQUE (CK)

Le revêtement CK supporte des charges thermiques et mécaniques plus importantes que les revêtements au chrome, molybdène ou plasma actuels, ce qui toutefois n'enlève rien à l'importance de ces revêtements éprouvés.

### REVÊTEMENT DE SEGMENT RENFORCÉ AU DIAMANT DE GOETZE (GDC)

Des diamants ultrafins de quelques nanomètres et aux propriétés hybrides spécifiques, sont incrustés dans la surface de glissement en chrome dur. La surface de glissement des segments à revêtement GDC (pour «Goetze Diamond Coating») présente un taux d'usure de segment réduit ainsi qu'une résistance au frottement nettement plus élevée par rapport aux autres revêtements.

# INSTRUCTIONS POUR LE MONTAGE DES SEGMENTS - FR

## INSTRUCTIONS POUR LE MONTAGE DES SEGMENTS

Avant de procéder à la pose des segments de piston de rechange Goetze, les gorges des segments doivent être nettoyées en prenant bien soin de ne pas endommager le rayon de fond des gorges ou les parois latérales. Le jeu axial ne doit pas dépasser 0,13 mm pour les moteurs essence et 0,20 mm pour les moteurs Diesel (à titre indicatif).

Les pistons présentant des gorges de segments en mauvais état ou une usure axiale excessive doivent toujours être remplacés par des pistons de rechange Nüral.

## SEGMENTS DE COMPRESSION

Il est recommandé d'installer les segments de piston à l'aide d'une pince à segment en faisant attention à ne pas trop écarter le segment. Un écartement excessif peut endommager le segment, provoquer des déformations et pourrait entraîner une rupture lors du fonctionnement.

Pendant le montage, veiller tout particulièrement à ce que l'inscription « TOP » (« haut ») soit toujours dirigée vers la tête du piston. Tous les segments de compression Goetze disposent de la marque de fabrique « GOE ». Aussi, nous recommandons d'installer tous les segments, y compris ceux sans marquage « TOP », avec le côté marqué orienté vers la tête du piston.

## SEGMENTS RACLEURS À 3 PIÈCES GOETZE DE TYPE VF

Seuls les segments racleurs d'huile à trois pièces Goetze VF ne disposent d'aucun marquage car les trois éléments peuvent être installés sans avoir à respecter un sens de montage particulier.

Placer le ressort d'expansion du segment racleur dans la gorge en veillant au préalable à ce que la jointure ne soit pas positionnée sur des fentes ou des trous dans le fond de la gorge de segment.

Tout en maintenant les extrémités du ressort d'expansion ensemble, le rail d'acier supérieur doit être enroulé dans la gorge en commençant à environ 45°-90° à gauche de la jointure du ressort d'expansion et en l'orientant vers cette dernière.

Le rail inférieur doit être installé à 45°-90° à droite de la jointure et orienté vers celle-ci.

Pour assurer un rodage correct des segments après la remise en état du moteur, nous conseillons de faire tourner le moteur sur environ 500-1 000 km, puis de changer l'huile.

## VÉRIFICATION DE L'INSTALLATION DES SEGMENTS

Une fois les segments en place sur le piston, vérifier qu'ils tournent librement dans leurs gorges. Les segments doivent alors être positionnés en orientant les fentes des segments à 120° les unes des autres.

**NB : Il est déconseillé de monter des segments chromés dans des cylindres avec alésage chromé.**

PVD	Nitruro de cromo	DLC	Carbon adiamantado

## FUNCIÓN Y REQUISITOS DE LOS SEGMENTOS DE PISTÓN

La función principal de los segmentos de pistón es crear estanqueidad: garantizar que el calor y la presión generados durante el proceso de combustión permanecen en la cámara de combustión y que no entra aceite en ella. Asimismo, los segmentos permiten transmitir el calor que se acumula en el pistón y regular la lubricación.

### DISEÑO DE LOS SEGMENTOS DE PISTÓN DE RECAMBIO GOETZE NORMFOR

Los segmentos de pistón GOETZE se incorporan como equipo original en los motores de combustión interna y los compresores de las cadenas de producción de todo el mundo. Nuestra continua colaboración con los departamentos de diseño y de tests de prácticamente todos los fabricantes de vehículos y motores, así como el trabajo de desarrollo y de pruebas que llevamos a cabo en nuestros propios laboratorios, nos proporcionan un detallado conocimiento que podemos aplicar en casi todos los motores. Dicho conocimiento y las décadas de experiencia que llevamos comercializando segmentos de pistón de recambio son la base del diseño individual de cada juego de segmentos de recambio, basado fundamentalmente en los materiales de fabricación y en los revestimientos de la cara que roza con el cilindro que ya se han probado en las aplicaciones de equipo original.

### POR LO GENERAL, EL PAQUETE DE SEGMENTOS SE COMPONE DE TRES ELEMENTOS:

1. Segmento de compresión: suele estar hecho de acero, fundición dúctil y fundición. Permite crear estanqueidad entre la mezcla de aire y combustible en la cámara de combustión.
2. Rascador de aceite: suele estar hecho de fundición dúctil y fundición. Tiene una doble función: combina las características del segmento de compresión con las del segmento de engrase.
3. Segmento de engrase: puede estar hecho de fundición dúctil y fundición, aunque si está compuesto por varias piezas se utiliza el acero. Permite regular la cantidad de aceite necesaria para lubricar los dos primeros segmentos.

### TENDENCIAS EN LA TECNOLOGÍA DE LOS SEGMENTOS DE PISTÓN

4. Reducción de la anchura del segmento, debido a que los motores son cada vez más pequeños y cuentan con relaciones de compresión más ajustadas y pistones más ligeros.
5. Reducción de la altura del segmento, para mayor estabilidad y rpm.
6. Reducción de la tensión del segmento, por la necesidad de reducir las pérdidas de fricción.
7. Metales del segmento: la tendencia actual es elegir aleaciones de gran resistencia, como la fundición dúctil y el acero, para poder soportar temperaturas más altas generadas por las mezclas de combustible más pobres y por la colocación del segmento más cerca de la corona para reducir las emisiones.

## REVESTIMIENTOS DE LA CARA QUE ROZA CON EL CILINDRO

### CROMADO, CR

El revestimiento duro de cromo depositado electrónicamente combina una excelente resistencia al desgaste con una alta resistencia al desgaste por fricción. Esto explica la superioridad de los segmentos cromados frente a los segmentos sin revestimiento y con tratamiento de la superficie.

### REVESTIMIENTO DE MOLIBDENO, MOL, MO

Para evitar el desgaste por fricción de la periferia del segmento, se reviste de molibdeno. Este proceso ha producido excelentes resultados dado que el molibdeno tiene un punto de fusión muy alto (2.620 °C) y una buena conductividad térmica, factores que explican la alta resistencia al desgaste por fricción y por ralladuras.

### REVESTIMIENTO DE PULVERIZACIÓN DE PLASMA, PS

Actualmente, para fabricar segmentos se suelen utilizar los revestimientos de pulverización de plasma, que poseen una alta resistencia a la rotura, la fricción y el desgaste, además de una alta resistencia inherente, mientras que sólo causa un desgaste limitado del cilindro.

### FOSFATACIÓN, P

Este proceso se utiliza para acelerar y mejorar la adaptación de los segmentos. La superficie del segmento se transforma en cristales de fosfato mediante un tratamiento químico.

### NITRURACIÓN, NT

El tratamiento superficial de nitruración permite reducir el desgaste de los segmentos de compresión y las láminas de acero de los de engrase.

### REVESTIMIENTO CROMO-CERÁMICO, CK

El revestimiento CK soporta una carga mecánica y térmica superior a los revestimientos de plasma, molibdeno y cromo existentes, aunque estos últimos, que se han probado y testeado, no dejan de tener su importancia.

Revestimiento reforzado Diamond de Goetze, GDC

En la superficie de roce de cromo duro se incrustan unos diamantes ultrafinos con materiales específicos, propiedades híbridas y dimensiones nanométricas. Si lo comparamos con otros revestimientos, la superficie de roce del segmento GDC presenta índices de desgaste menores y una resistencia considerablemente mayor a las ralladuras.

# INSTRUCCIONES DE MONTAJE DE LOS SEGMENTOS DE PISTÓN - ES

## INSTRUCCIONES DE MONTAJE DE LOS SEGMENTOS DE PISTÓN

Antes de montar los segmentos de pistón Goetze de recambio, es necesario limpiar las ranuras de los segmentos con cuidado para no dañar las paredes laterales ni los radios de la raíz de la ranura. La holgura axial máxima es, en motores de gasolina, de 0,13 mm, y en motores diésel, de 0,20 mm.

Si los pistones presentan un deterioro en la ranura de los segmentos o un desgaste axial excesivo, cámbielos por pistones Nüral.

## SEGMENTOS DE COMPRESIÓN

Los segmentos de pistón se deben colocar con unas pinzas especiales sin abrir el segmento más de lo necesario.

Si se estira demasiado, puede quedar dañado, deformado o incluso llegar a romperse cuando el motor está en funcionamiento.

Durante el montaje, ponga especial atención a la marca TOP, que debe estar mirando a la corona del pistón.

Todos los segmentos de compresión Goetze llevan la marca de fabricante «GOE», y recomendamos colocar todos los segmentos, incluidos los que no presentan la marca TOP, con el lado marcado en dirección a la corona del pistón.

## SEGMENTOS DE ENGRASE GOETZE VF DE TRES PIEZAS

Los únicos segmentos que no están marcados son los de engrase Goetze VF de tres piezas, ya que es indiferente la orientación en la que se coloquen.

Coloque el expansor en la ranura teniendo en cuenta que la junta no queda sobre las acanaladuras u orificios del fondo de la ranura.

Mientras se sujetan los dos extremos del expansor, la lámina de acero superior debe quedar alrededor de la ranura a partir de entre 45° y 90° a la izquierda de la junta del expansor siguiendo esta dirección.

La lámina inferior se debe colocar entre 45° y 90° a la derecha de la junta siguiendo esta dirección.

Para asegurarse de que los segmentos se adapten de forma adecuada después de reacondicionar el motor, recomendamos que recorra una distancia de entre 500 y 1.000 kilómetros y, a continuación, cambie el aceite.

## COMPROBACIÓN DEL MONTAJE DE LOS SEGMENTOS

Una vez montados los segmentos en el pistón, compruebe que giran en las ranuras sin dificultad. Los segmentos se deben colocar con las puntas abiertas a intervalos de 120°.

**Nota: no se deben colocar segmentos cromados en cilindros cromados.**

## PIERŚCIENIE TŁOKOWE – FUNKCJE I WYMAGANIA

Podstawową funkcją pierścieni tłokowych jest zapewnienie szczelności – zapewnienie by energia cieplna i ciśnienie wytwarzane w trakcie procesu spalania paliwa pozostały w komorze spalania oraz by nie dostał się tam olej silnikowy. Ponadto pierścienie tłokowe uczestniczą w przepływie ciepła z tłoka do bloku cylindrów oraz mają istotny wpływ na proces smarowania.

### KONSTRUKCJA GOETZE NORMFORM – ZAMIENNYCH PIERŚCIENI TŁOKOWYCH

Pierścienie tłokowe GOETZE są montowane na liniach produkcyjnych na całym świecie, jako wyposażenie oryginalne – OE w silnikach spalinowych o wewnętrznym spalaniu oraz w sprężarkach. Dzięki ciągłej współpracy z departamentami projektowymi i testowymi praktycznie wszystkich producentów silników i samochodów oraz dzięki własnym testom w naszych laboratoriach i pracami nad rozwojem technologii, dysponujemy spójną i szeroką wiedzą, która może być przydatna w przypadku niemalże każdego silnika. Ta wiedza know-how i dziesiątki lat doświadczeń z pierścieniami tłokowymi są bazą przy indywidualnym projekcie każdego zestawu pierścieni tłokowych. Projekty zasadniczo korzystają z rodzajów materiałów pierścieni i pokryć powierzchni roboczych, które sprawdzily się w zastosowaniach na montaż fabryczny – OE.

### OPAKOWANIE PIERŚCIENI TŁOKOWYCH ZAWIERA NAJCZĘŚCIEJ TRZY TYPY PIERŚCIENI:

1. Górny pierścień kompresyjny – często wykonany ze stali, żeliwa ciągliwego i żeliwa szarego. Ten rodzaj pierścieni odpowiada za uszczelnienie komory spalania w trakcie kompresji i spalania mieszanki paliwowo-powietrznej
2. Drugi pierścień kompresyjny – zasadniczo produkowany z żeliwa ciągliwego i żeliwa szarego. Ten rodzaj pierścieni łączy funkcję pierścieni kompresyjnych i pierścieni olejowych.
3. Pierścień olejowy - może być wytwarzany z żeliwa ciągliwego oraz żeliwa szarego, a także ze stali w przypadku pierścieni wieloelementowych. Funkcją tego pierścienia jest regulowanie ilości oleju niezbędnego do smarowania górnego i drugiego pierścienia kompresyjnego.

### TRENDY W TECHNOLOGII PIERŚCIENI TŁOKOWYCH

4. Zmniejszanie grubości pierścieni – w związku z popularyzacją mniejszych silników, wyposażanych w lepsze tłoki i krótsze wysokości kompresyjne
5. Zmniejszanie wagi pierścieni – w celu osiągnięcia wyższych prędkości obrotowych i stabilności biegu
6. Zmniejszanie naprężeń roboczych – w celu redukcji strat wynikających z tarcia pierścieni o powierzchnię cylindra
7. Materiały na pierścienie - tendencja rozwojowa jest skierowana w kierunku materiałów o większej wytrzymałości, takich jak żeliwo ciągliwe czy stal w celu zdolności pracy w wyższych temperaturach, które z kolei są wynikiem pracy silników na coraz uboższych mieszankach oraz umieszczania pierścieni w coraz wyższych rejonach tłoka, by zmniejszać emisję szkodliwych czynników.

## POKRYCIA POWIERZCHNI ROBOCZYCH

### POKRYCIE CHROMOWE, CR

Twarda galwaniczna powłoka chromowa łączy wysoką twardość z dużą odpornością na ścieranie. Te właściwości powodują, że pierścienie chromowane mają przewagę nad pierścieniami nie pokrywanymi lub pierścieniami z ulepszonymi powierzchniami roboczymi.

### POKRYCIE MOLIBDENOWE, MOL, MO

Dla uniknięcia ścierania się powierzchni skrajnych stosuje się pokrycie molibdenem.

To rozwiązanie daje doskonałe rezultaty. Molibden ma bardzo wysoką temperaturę topnienia – 2620°C i dobrą przewodność cieplną, czyli cechy bardzo korzystne jeśli chodzi o odporność na ścieranie i rysowanie.

### POKRYCIE ROZPYLONĄ PLAZMĄ – PS

Pokrycie rozpyloną plazmą charakteryzuje się dużą odpornością na zużycie, ścieranie i pęknięcia oraz dużą wytrzymałością. Nie powoduje przy tym znacznego zużycia powierzchni cylindra. Dzięki tym właściwościom ten rodzaj pokrycia jest obecnie z powodzeniem stosowany w produkcji.

### FOSFORANOWANIE, P

Ten proces jest stosowany w celu przyspieszenia i poprawienia procesu docierania się pierścieni tłokowych. Powierzchnia pierścienia jest zmieniona przez reakcję chemiczną w kryształ fosforanowe.

### AZOTOWANIE, NT

Jest to obróbka powierzchni stalowych w celu zmniejszenia zużycia w stalowych pierścieniach kompresyjnych oraz stalowych elementach pierścieni olejowych.

### POKRYCIE CHROMOWO-CERAMICZNE, CK

Pokrycie CK wytrzymuje wyższe mechaniczne i termiczne obciążenia niż istniejące pokrycia chromowe, molibdenowe i plazmowe. Niemniej jednak, te wypróbowane i przetestowane pokrycia nie straciły nic ze swych zalet.

### POKRYCIE DIAMENTOWE GOETZE, GDC

Bardzo drobne diamenty, o rozmiarach nanometrycznych, charakteryzujące się hybrydowymi właściwościami są niejako wbudowane w twardą chromową powierzchnię roboczą. Powierzchnia pierścieni pokrytych metodą GDC jest bardziej odporna na zużycie i zdecydowanie bardziej odporna na ścieranie w porównaniu do innych rodzajów pokryć.

# PIERŚCIENIE TŁOKOWE – ZALECENIA MONTAŻOWE - PL

## PIERŚCIENIE TŁOKOWE – ZALECENIA MONTAŻOWE

Przed przystąpieniem do montażu pierścieni tłokowych należy oczyścić rowki pierścieniowe w tłoku. Proces czyszczenia należy przeprowadzić z odpowiednią uwagą, by nie uszkodzić powierzchni bocznych ani denka rowka. Maksymalny dopuszczalny luz osiowy dla silników benzynowych wynosi 0,13 mm, a w przypadku silników dieslowskich – 0,20 mm.

Tłoki z wadliwymi/uszkodzonymi rowkami pierścieniowymi lub z nadmiernym luzem osiowym powinny być zawsze wymieniane na zamienne tłoki Nüral.

## PIERŚCIENIE KOMPRESYJNE

Pierścienie tłokowe powinny być montowane przy użyciu specjalnych szczypiec by uniknąć większego niż konieczne rozchylenia pierścienia. Zbytne rozchylenie pierścienia może doprowadzić do jego uszkodzenia. Może spowodować odkształcenia, co może zakończyć się pęknięciem pierścienia w trakcie tej operacji.

W trakcie montażu należy zwrócić szczególną uwagę na oznaczenie góry (TOP), które powinno być zawsze skierowane w kierunku korony tłoka.

Wszystkie pierścienie kompresyjne Goetze będą miały znak producenta „GOE”. Zalecamy, by wszystkie pierścienie, włączając również te bez oznaczenia TOP były montowane powierzchnią oznakowaną w kierunku korony tłoka.

## OLEJOWE PIERŚCIENIE 3-CZĘŚCIOWE TYPU GOETZE VF

Jedynie olejowe pierścienie 3-częściowe typu Goetze VF nie są znakowane, gdyż wszystkie 3 elementy mogą być montowane bez względu na orientację.

Należy najpierw zamontować element rozprężny w rowku na pierścień, zwracając uwagę, by połączenie nie było zlokalizowane nad szczelinami lub otworami w bazie rowka pierścieniowego.

Trzymając końce elementu rozprężnego razem, należy rozpocząć wkładanie górnego elementu stalowego w rowek pierścieniowy, zaczynając o około 45°-90° na lewo od połączenia elementu rozprężnego, kierując się w kierunku połączenia.

Dolny element stalowy powinien być montowany 45° - 90° na prawo od połączenia elementu rozprężnego, kierując się w kierunku połączenia. Aby zapewnić dobre docieranie się pierścieni po naprawie silnika, zalecamy wymienić olej po przejechaniu około 500-1000 km.

## SPRAWDZANIE POPRAWNOŚCI MONTAŻU PIERŚCIENI TŁOKOWYCH

Po zamontowaniu pierścieni na tłoku należy upewnić się, że mogą się one swobodnie obracać w rowkach. Następnie pierścienie należy umieścić tak, by szczeliny pierścieni były rozmieszczone co 120°.

**UWAGA. Pierścienie o pokryciach chromowych nie powinny być montowane do cylindrów, które mają również chromowane pokrycia powierzchni.**

## ПОРШНЕВЫЕ КОЛЬЦА - ФУНКЦИИ И ТРЕБОВАНИЯ

**Основное назначение поршневых колец - уплотнение: обеспечить, чтобы высокая температура и давление, возникающие в процессе сгорания топлива, оставались в камере сгорания, а масло не попадало туда. Кроме того, кольцо должно отводить тепло от поршня и регулировать процесс смазки.**

### КОНСТРУКЦИЯ ПОРШНЕВЫХ КОЛЕЦ GOETZE NORMFORM

Поршневые кольца GOETZE устанавливаются в качестве оригинального оборудования на двигатели внутреннего сгорания и компрессоры на производственных линиях по всему миру.

Постоянное сотрудничество с конструкторскими отделами и испытателями практически всех производителей двигателей и автомобилей, а также разработки и испытания, проводимые в наших лабораториях, дают обширные знания, которые можно применить практически на любом двигателе. Эти ноу-хау и накопленный десятилетиями опыт в сфере сменных поршневых колец являются основой для индивидуального проектирования каждого комплекта сменных колец. Конструкция в основном базируется на материалах для поршневых колец и покрытиях рабочих поверхностей, зарекомендовавших себя в составе оригинального оборудования.

### ОБЫЧНО КОМПЛЕКТ СОСТОИТ ИЗ ТРЕХ КОЛЕЦ:

1. Верхнее компрессионное кольцо – часто изготавливается из стали, чугуна с шаровидным графитом и литейного чугуна, эти кольца удерживают топливовоздушную смесь в камере сгорания.
2. Второе компрессионное кольцо – обычно изготавливается из чугуна с шаровидным графитом и литейного чугуна, эти кольца выполняют двойную функцию: они играют роль как компрессионного, так и маслосъемного кольца.
3. Маслосъемное кольцо – может изготавливаться из чугуна с шаровидным графитом и литейного чугуна, однако для многоэлементных колец используется сталь. Эти кольца регулируют количество масла, необходимого для смазки верхнего и второго колец.

### ТЕНДЕНЦИИ В ТЕХНОЛОГИЯХ СОЗДАНИЯ ПОРШНЕВЫХ КОЛЕЦ

4. Уменьшение ширины кольца – из-за уменьшения размеров двигателей, облегчения поршней и снижения расстояния от днища поршня до оси поршневого пальца.
5. Снижение веса колец – для повышения оборотов и устойчивости двигателя.
6. Снижение напряжения в кольцах – из-за необходимости уменьшить потери на трение.
7. Металлургические аспекты производства колец – существует тенденция к использованию высокопрочных сплавов, таких как чугун с шаровидным графитом и сталь. Это позволяет противостоять высоким температурам, возникающим при сгорании обедненного топлива, и из-за более высокого расположения колец на поршне для снижения выбросов в атмосферу.

## ПОКРЫТИЯ РАБОЧИХ ПОВЕРХНОСТЕЙ

### ХРОМИРОВАНИЕ, CR

Электроосажденное твердое хромовое покрытие сочетает в себе прекрасную износостойчивость с высокой устойчивостью к задирам. Этим объясняется превосходство хромированных колец по сравнению с кольцами без покрытия и кольцами с обработанной поверхностью.

### МОЛИБДЕНОВОЕ ПОКРЫТИЕ, MOL, MO

Чтобы не допустить задиры, края кольца покрывают молибденом. Такое решение продемонстрировало превосходные результаты. Молибден отличается очень высокой температурой плавления (2620°C) и хорошей теплопроводностью – эти показатели определяют его высокую устойчивость к задирам и износу.

### ПЛАЗМЕННОЕ НАПЫЛЕНИЕ, PS

Сегодня все большее распространение получает плазменное напыление, обладающее высокой устойчивостью к износу, задирам и разломам, а также высокой прочностью, и при этом вызывающее лишь незначительный износ цилиндра.

### ФОСФАТИРОВАНИЕ, P

Этот процесс используется для ускорения и улучшения приработки колец. На поверхности кольца с помощью химической обработки создаются кристаллы фосфатов.

### АЗОТИРОВАНИЕ, NT

Азотирование поверхности позволяет уменьшить износ стальных компрессионных колец и стальных кромок маслосъемных колец.

### ХРОМОКЕРАМИЧЕСКОЕ ПОКРЫТИЕ, SK

Покрытие SK выдерживает более высокие тепловые и механические нагрузки по сравнению с существующими хромовыми, молибденовыми и плазменными покрытиями, хотя эти проверенные и испытанные покрытия не теряют своей актуальности.

### АЛМАЗНОЕ ПОКРЫТИЕ ДЛЯ КОЛЕЦ GOETZE, GDC

Алмазные нанокристаллы, обладающие специфическими комбинированными свойствами размерами, внедряются в твердую рабочую поверхность из хрома. По сравнению с другими покрытиями рабочая поверхность кольца GDC отличается пониженным износом и значительно более высокой устойчивостью к задирам.

# УКАЗАНИЯ ПО УСТАНОВКЕ ПОРШНЕВЫХ КОЛЕЦ - RU

## УКАЗАНИЯ ПО УСТАНОВКЕ ПОРШНЕВЫХ КОЛЕЦ

Перед установкой ремонтных поршневых колец Goetze следует очистить канавки на поршне, соблюдая особую осторожность, чтобы не повредить радиус или стенки канавок. Максимальный осевой зазор для бензиновых двигателей составляет 0,13 мм, а для поршней дизельных двигателей – 0,20 мм

Поршни с дефектами канавок или сильным осевым износом следует заменить ремонтными поршнями Nüral.

## КОМПРЕССИОННЫЕ КОЛЬЦА

Поршневые кольца следует устанавливать с помощью специальных щипцов, стараясь не разводить концы колец больше необходимого.

Чрезмерное растяжение может повредить кольцо, вызвать его деформацию и стать причиной поломки во время работы. Во время сборки обращайте особое внимание на маркировку TOP (Верх) – эта сторона должна быть обращена к головке поршня.

Все компрессионные кольца Goetze помечены знаком производителя "GOE"; рекомендуется все кольца, в том числе не имеющие маркировки „TOP“, устанавливать маркированной стороной к головке поршня.

## ТРЕХЭЛЕМЕНТНЫЕ МАСЛОСЪЕМНЫЕ КОЛЬЦА GOETZE VF

Маркировка отсутствует только на трехэлементных маслосъемных кольцах Goetze VF, поскольку все три элемента можно устанавливать без учета ориентации.

Вставьте экспандер в канавку так, чтобы замок не был расположен рядом с прорезями или отверстиями в основании канавки кольца.

Сжав концы экспандера, вставьте верхнюю направляющую в канавку, начиная под углом примерно 45°-90° слева от замка экспандера и продолжая установку по направлению к замку.

Нижнюю направляющую следует вставить под углом 45°-90° справа от замка и продолжать установку в направлении замка. Чтобы обеспечить правильную приработку колец после ремонта двигателя, рекомендуется сменить масло после пробега в 500 – 1000 км.

## ПРОВЕРКА ПОСАДКИ КОЛЕЦ

После установки колец на поршень убедитесь, что кольца свободно вращаются в канавках. Замки колец следует расположить с интервалами в 120°

**ВВ. Хромированные кольца нельзя устанавливать в цилиндры с хромированными зеркалами.**

## 9 أكواد المعالجة والأغطية

الوصف	الكود والنوع	الوصف	الكود والنوع
مصنوع من الفوسفات	P	مطلي بالكروم	CR
مصنوع من النتريد	NT	مرصع بالموليبدينوم	MO
مغطى برشاش البلازما	PS	مكسو بالموليبدينوم	MOL
ذو غطاء ماس Goetze	GDC	مكسو بالسيراميك - الكروميوم	CK
الماس مثل الكربون	DLC	كروم نيتريد	PVD

## أغطية الوجه أثناء التشغيل

### CR غطاء الكروم

يجمع غطاء الكروم الصلب المرسب بالكهرباء بين المقاومة الممتازة ضد التآكل والمقاومة العالية للخدش. وهذا هو سر تفوق الحلقات المطلية بالكروم على الحلقات غير المطلية والأسطح المعالجة بالحلقات.

### MOL و MO أغطية الموليبيديوم

لتفادي خدش الحد الخارجي يتم كسو الحلقة بالموليبيديوم، وقد أسفرت هذه العملية عن نتائج رائعة. ويحظى الموليبيديوم بنقطة زوبان عالية جدًا (2620 درجة مئوية) وقدرة توصيل جيدة للحرارة، مما يؤدي إلى وجود مقاومة عالية للخدش والتحرز.

### PS غطاء رشاش البلازما

يتم استخدام عملية التغطية برشاش البلازما التي تشتمل على مقاومة عالية ضد التآكل والخدش والانفجار وكذلك قوة متلازمة عالية وهي تتسبب في تآكل محدود للأسطوانة لذا يتم استخدامها حاليًا بنجاح في عمليات الإنتاج.

### P الطلاء بالفوسفات

يتم إجراء هذه العملية من أجل تسريع وتحسين انطباق الحلقات. ويتحول سطح الحلقة بفعل المعالجة الكيميائية إلى بلورات الفوسفات.

### NT الطلاء بالنيتريد

تتم معالجة السطح بالنيتريد لتقليل تآكل حلقات ضغط الصلب وشرايط الصلب في حلقات التحكم في الزيت.

### CK أغطية السيراميك - الكروميوم

تتحمل أغطية CK أحمال ميكانيكية وحرارية عالية أكثر من أغطية البلازما والموليبيديوم والكروم الحالي، وبرغم ذلك تم تجربتها واختبارها وتبين عدم فقدها لأي من مزاياها.

### GDC غطاء الحلقة المقواة بالماس GOETZE

يتم دمج ماس فائق النقاء مع مواد خاصة وخصائص متنوعة وأبعاد نانومتر في سطح تشغيل الكروميوم الصلب. ويمتاز سطح تشغيل حلقة GDC بأقل معدلات تآكل للحلقة وأكبر مقاومة للخدش مقارنة بالأغطية الأخرى.

## متطلبات ووظيفة حلقات الكباس

الوظيفة الأساسية لحلقات الكباس هي توفير سدادة: لضمان بقاء الحرارة والضغط المتولدين أثناء عملية الاحتراق داخل غرفة الاحتراق وعدم مرور الزيت داخل غرفة الاحتراق. وبالإضافة إلى ذلك، ينبغي أيضًا أن تقوم الحلقة بإبعاد الحرارة عن الكباس وتنظم عملية التشحيم والتزييت.

### تصميم أشكال معيار قطع غيار حلقات الكباس التي تصنعها GOETZE

يتم تركيب حلقات كباس GOETZE باعتبارها معدات أصلية لمحركات الاحتراق الداخلي والضاغطات في خطوط الإنتاج في جميع أنحاء العالم. من خلال التعاون الدائم بين إدارات التصميم والاختبار تقدم كل جهة تصنيع محرك أو مركبة وكذلك أعمال التطوير والاختبارات التي تُجرى في مختبراتنا البحثية معلومات شاملة يمكن استخدامها في جميع المحركات تقريبًا. وتعد معارفنا وخبرتنا التي اكتسبناها على مر عقود من الزمان قضيناها في مجال قطع غيار حلقات الكباس هي أساس التصميم الفردي لكل مجموعة من قطع غيار الحلقات.

ويرتكز التصميم في الأساس على المواد التي تصنع منها حلقات الكباس ودهانات للوجه التي أثبتت نفسها مجال استخدام المعدات الأصلية.

### تتكون مجموعة الحلقة بشكل عام من ثلاث حلقات:

حلقة الضغط العلوية - تصنع في الغالب من الصلب والحديد الدن وحديد الزهر، تعمل هذه الحلقات على سد مزيج الوقود/الهواء في غرفة الاحتراق.

حلقة الضغط الثانية - تصنع عادة من الحديد الدن وحديد الزهر، هذه الحلقات ذات وظيفة مزدوجة حيث تجمع بين وظيفة حلقة الضغط وحلقة التحكم في الزيت.

حلقة التحكم في الزيت - يمكن أن تصنع من الحديد الدن وحديد الزهر، ومع ذلك يتم استخدام الصلب مع الحلقات ذات القطع المتعددة، تقوم هذه الحلقة بتنظيم كمية الزيت المطلوبة لتزييت الحلقين العلوية والثانية.

### الاتجاهات الحديثة في تكنولوجيا حلقات الكباس

تقليل اتساع الحلقة - بسبب المحركات الصغيرة ذات الكباسات الخفيفة وارتفاعات الضغط القصيرة.

تقليل عرض الحلقة - لمزيد من الثبات ولزيادة RPM (عدد دورات المحرك في الدقيقة).

تقليل ضغط الحلقة - بسبب مطالب تقليل فاقد القدرة الاحتكاكية. الخصائص المعدنية للحلقة - الاتجاه نحو السبائك عالية القوة مثل حديد الدن والصلب من أجل تحمل درجات الحرارة العالية الناتجة عن مزيج الوقود الضعيف ووضع الحلقة العليا في الكباس لتقليل الانبعثات.

# AR - كيفية استخدام هذا الكتالوج

## إرشادات تركيب حلقات الكباس

قبل تركيب حلقات كباس Goetze البديلة، ينبغي تنظيف تجاويف حلقات الكباس بعناية خاصة حرصًا على عدم إتلاف نصف قطر جذر التجاويف أو الحوائط الجانبية. الحد الأقصى لخلوص محور محركات البنزين 0,13 مم وبالنسبة لكباسات الديزل 0,20 مم ينبغي دائمًا استبدال الكباسات التي بها فتحات حلقة معيبة أو تآكل شديد في المحور بقطع غيار كباسات Nural.

## الحلقات الضاغطة

ينبغي تركيب حلقات الكباس باستخدام زرديّة حلقات الكباس والحرص على عدم فتح الحلقة أكثر من اللازم. يمكن أن ينتج عن الفتح بدرجة أكثر من اللازم تلف الحلقة وحدوث تشوه واحتمال انكسار الحلقة أثناء التشغيل. ينبغي الانتباه بشدة أثناء التجميع للعلامات العليا بحيث تتجه دائمًا ناحية تاج الكباس. تحمل جميع حلقات الضغط من Goetze علامة جهة التصنيع "GOE"، وننصح بتركيب جميع الحلقات بما في ذلك الحلقات التي لا تحمل علامات علوية مع توجيه الجانب الذي يحمل العلامة في مواجهة تاج الكباس.

## حلقات زيت GOETZE مكونة من ثلاث قطع من نوع VF

حلقات التحكم في الزيت Goetze المكونة من ثلاث قطع من نوع VF هي الوحيدة التي لا تحمل علامة في حين يمكن تركيب العناصر الثلاثة بدون توجيه.

قم بتركيب الموسع بالفتحات أولاً مع الحرص على عدم وضع الوصلة فوق الثقوب أو الفتحات الموجودة في أسفل فتحة الحلقة. أثناء حمل طرفي الموسع معاً، ينبغي لف الشريط الصلب العلوي تجاه بداية الفتحة بزاوية يبلغ قطرها 45-90 درجة تقريباً تجاه يسار وصلة الموسع التي تعمل في اتجاه الوصلة.

ينبغي تركيب الشريط السفلي بزاوية قطرها 45-90 درجة يمين الوصلة التي تعمل في اتجاه الوصلة. لضمان استقرار الحلقات بشكل صحيح بعد إصلاح المحرك، ننصح بتشغيل المحرك لمسافة 300 - 600 ميل تقريباً ثم تغيير الزيت.

## فحص عملية تركيب الحلقات

بعد تركيب الحلقات في الكباس، تأكد من حرية دورانهم داخل فتحات الحلقة. ينبغي توجيه الحلقات آنذاك مع فجوات الحلقة مع الحفاظ على فواصل مقدارها 120 درجة  
ملاحظة ينبغي تركيب الحلقات المطلية بالكروم بالأسطوانة باستخدام قطر الأسطوانة المطلي بالكروم.

# TERMS OF BUSINESS

## EN - IMPORTANT

Reproduction of this catalogue or parts thereof is only allowed with our explicit permission in writing. Pictorial representations and design are copyrighted. Claims for damages, of any form whatsoever, resulting from details made in this catalogue or from incorrect use, application, storage or handling, are explicitly excluded. Contractual rights and any resulting or related claims based thereon, irrespective of form, initially come into being on the basis of a separate written agreement, in particular on the basis of our general terms of sale and delivery.

All former statements lose their validity with the publication of this catalogue.

The catalogue is not an operating manual for the use and installation of piston rings. It does not contain any advice in a legal sense. The catalogue neither replaces the constantly applicable technical regulations – particularly for tolerances – nor the installation and maintenance stipulations of the individual engine manufacturer.

Also, it is not possible to forego the expertise of those carrying out the installation and application. The individual references made in this catalogue for the installation and the application of piston rings are instructions solely for the technically qualified specialist and are to be checked and verified by them for their suitability in each case. Federal-Mogul accepts no responsibility for application decisions.

The contents of the catalogue are not intended to create or substitute any contractual agreement which has to be reserved exclusively to a separate agreement between 2 identified parties, whereby seller can be only one of our Federal-Mogul entities as mentioned on the inside back cover.

The right is retained to correct errors and alterations, particularly with regard to amendments in the engine manufacturers' details and stipulations.

## DE - ZUR BEACHTUNG

Die Reproduktion dieses Katalogs ist nur mit unserer ausdrücklichen Genehmigung gestattet. Bildliche Darstellungen und der Entwurf sind urheberrechtlich geschützt. Schadenersatzansprüche in jedweder Form unter Berufung auf die Angaben in diesem Katalog oder infolge unsachgemäßen Gebrauchs, unsachgemäßer Anwendung, Lagerung oder Handhabung sind ausdrücklich ausgeschlossen. Vertragliche Rechte und etwaige hieraus folgende oder abgeleitete Ansprüche jedweder Art werden erst durch getrennte schriftliche Vereinbarung, im Besonderen auf der Grundlage unserer allgemeinen Verkaufs- und Lieferbedingungen, begründet. Mit Erscheinen dieses Katalogs verlieren alle früheren Angaben ihre Gültigkeit.

Der Katalog stellt keine Anleitung für den Gebrauch und den Einbau von Kolbenringsätzen dar. Es werden keine Ratschläge im rechtlichen Sinne abgegeben. Der Katalog ersetzt weder die jeweils geltenden technischen Maßgaben – insbesondere für Toleranzen – noch die Einbau- und Wartungsvorschriften des jeweiligen Motorenherstellers. Auch ist die Sachkenntnis derer, die den Einbau und die Anwendung vornehmen, eine wesentliche Größe. Die Aussagen in diesem Katalog zum Einbau und Einsatz von Kolbenringsätzen richten sich ausschließlich an den technisch versierten Fachmann und sind von Fall zu Fall auf Eignung und Gültigkeit zu überprüfen. Federal-Mogul übernimmt keine Verantwortung für Anwendungsentscheidungen.

Der Inhalt des Katalogs begründet oder ersetzt keine vertragliche Vereinbarung, welche ausschließlich einer getrennten Vereinbarung zwischen zwei bestimmten Parteien vorbehalten sein muss, in der die Verkäuferpartei eine unserer innen im Rückdeckel genannten Federal-Mogul Gesellschaften ist. Das Recht auf Berichtigung von Irrtümern und Abänderungen, insbesondere hinsichtlich geänderter Angaben und Bestimmungen der Motorenhersteller, bleibt vorbehalten.

## FR - IMPORTANT

La reproduction de ce catalogue, même partielle, n'est autorisée qu'avec notre accord préalable et par écrit. Les illustrations graphiques et la présentation font l'objet d'un copyright. Nous excluons toutes réclamations ayant pour objet ce catalogue ou pouvant résulter de son incompréhension, portant sur de mauvaises utilisations, manipulations, manutentions ou mauvais stockage. Des droits contractuels et des droits dérivés, de quelque nature qu'ils soient, ne peuvent résulter que d'un accord écrit, sur la base de nos conditions générales de ventes et de livraisons. Ce catalogue annule et remplace toute édition antérieure.

Le catalogue n'est pas une notice d'utilisation et de montage des segments de piston. Il ne contient pas de directives en tant que telles. Le catalogue ne remplace ni les prescriptions techniques, toujours prioritaires, particulièrement pour les tolérances, ni les prescriptions de montage et d'entretien des fabricants des moteurs figurant dans ce catalogue. Il ne peut en aucun cas remplacer les connaissances professionnelles nécessaires pour le montage et l'utilisation des produits. Les remarques données pour le montage et l'utilisation des segments de piston sont exclusivement destinées au professionnel averti et de formation technique, à qui il appartient de vérifier la conformité des indications pour chaque cas. La responsabilité quant aux décisions d'utilisation ne peut être prise en charge par Federal-Mogul.

Le contenu de ce catalogue ne peut constituer ou remplacer un contrat qui doit faire l'objet d'un document séparé établi entre 2 parties, dont l'une doit être une entité légale de Federal-Mogul (dont la liste figure sur la couverture arrière). Nous nous réservons le droit d'apporter toutes corrections d'erreurs et modifications, suite notamment à de nouvelles données fournies par les constructeurs.

## ES - IMPORTANTE

Queda totalmente prohibida la reproducción, total o parcial, del contenido de este catálogo, salvo previa autorización nuestra, realizada por escrito. Están, asimismo, reservados todos los derechos sobre el diseño y presentación del catálogo. No se aceptará ningún tipo de reclamación que esté basada en la interpretación de los datos contenidos en este catálogo, así como en el incorrecto uso, manipulación o almacenaje de nuestras piezas. Únicamente se aceptarán reclamaciones que estén basadas en derechos contractuales o en los motivos arriba indicados, siempre que exista un acuerdo especial y por escrito basado en nuestras condiciones generales de venta y suministro.

Con la edición de este catálogo queda anulada toda la información contenida en catálogos anteriores. El catálogo no es un manual para el uso e instalación de los segmentos de pistón, y no representa una asesoría técnica en el sentido legal. Los datos del catálogo no sustituyen, en ningún caso, a las especificaciones técnicas, tanto en lo que se refiere a tolerancias como a las instrucciones de instalación y mantenimiento, indicadas por los fabricantes de los motores, especificaciones que serán siempre prioritarias. Se entiende que el uso y montaje de estas piezas está encomendado a personal debidamente cualificado. Las indicaciones sobre uso y montaje de los segmentos de pistón, contenidas en este catálogo, están exclusivamente dirigidas a profesionales con la debida capacitación y formación técnica, que deben decidir en cada caso sobre la exactitud de las mismas. La responsabilidad de estas decisiones no puede ser, en ningún caso atribuidas a Federal-Mogul.

La información facilitada en el catálogo no representa o sustituye ningún tipo de acuerdo, quedando a tal efecto, el acuerdo por separado entre dos partes donde sólo entidades de Federal-Mogul, pueden ser identificadas como la parte vendedora como se menciona en la contraportada.

Los datos e instrucciones contenidos en este catálogo podrán ser corregidos o modificados sin previo aviso.

# TERMS OF BUSINESS

## PL - WAŻNE

Reprodukcja tego katalogu lub jego części jest możliwa tylko za wyraźną zgodą na piśmie. Ilustracje i grafika są chronione prawem autorskim. Roszczenia dotyczące szkód, niezależnie od formy, wynikających z przedstawionych w tym katalogu treści lub z nieprawidłowego użycia, zastosowania, przechowywania lub obsługi są w sposób wyraźny wyłączone. Prawa umowne i inne wynikające lub związane z roszczeniami na nimi opartymi, niezależnie od formy, są tworzone na podstawie oddzielnej umowy pisemnej, w szczególności na podstawie naszych ogólnych warunków sprzedaży i dostawy.

Wszystkie wcześniejsze oświadczenia tracą ważność wraz z opublikowaniem tego katalogu.

Katalog nie jest instrukcją obsługi i instalacji pierścieni tłokowych. Nie zawiera porad w sensie prawnym. Katalog nie zastępuje obowiązujących uregulowań technicznych – zwłaszcza w zakresie tolerancji – ani opisów montażu i konserwacji poszczególnych producentów silników.

Nie jest również możliwe pominięcie doświadczenia osób dokonujących doboru i przeprowadzających montaż części. Poszczególne informacje zawarte w tym katalogu, a dotyczące doboru, montażu i stosowania pierścieni tłokowych, są instrukcjami wyłącznie dla wykwalifikowanego technicznie specjalisty, który w każdym przypadku musi je sprawdzić i zweryfikować ich przydatność. Federal-Mogul nie przyjmuje odpowiedzialności za decyzje dotyczące zastosowania.

Zawartość tego katalogu nie stanowi ani nie zastępuje umowy, która może być zawarta jedynie jako oddzielny dokument podpisany przez dwie strony, przy czym sprzedawcą może być tylko jedna z jednostek koncernu Federal-Mogul, zgodnie z opisem na wewnętrznej stronie tylnej okładki.

Zachowane zostaje prawo korygowania błędów i wprowadzania zmian, zwłaszcza odnośnie zmian dotyczących parametrów i warunków pracy określonych przez producentów silników.

Pomimo tego, że dokonujemy wszelkich starań przy korzystaniu z najbardziej aktualnych informacji dotyczących tak szerokich zakresów modeli pojazdów i silników występujących na rynku, nie możemy zagwarantować, że nasz program dostaw pokryje potrzeby wszystkich występujących wersji silników. Ponadto, nie ma żadnego zabezpieczenia przed nieujawnionymi zmianami wprowadzanymi w trakcie produkcji przez producentów silników lub przed zmianami, które dotarły do nas już po przekazaniu danych do druku. Dlatego nie możemy zaakceptować żadnej odpowiedzialności dotyczącej nieścisłości informacji zawartych w tym katalogu. Jest niezbędnym, by przed montażem jakiegokolwiek z naszych produktów dokładnie sprawdzić czy oferowana część jest odpowiednia dla konkretnego zastosowania. By ułatwić Państwu korzystanie z katalogu, dostarczamy specyfikacje materiałów użytych do wytworzenia naszych produktów oraz ich wymiary. W przypadku jakichkolwiek wątpliwości prosimy o kontakt z producentem silnika. Dla Państwa własnej korzyści prosimy pamiętać, że montaż niewłaściwych części może spowodować uszkodzenie silnika, za który to Państwo, jako wykonujący remont, jesteście odpowiedzialni przed swoimi klientami.

## RU - ВАЖНО

Воспроизводство данного каталога или ее частей позволено только с нашим явным разрешением в письменной форме. Иллюстрации и дизайн защищены авторским правом.

Требования о возмещении ущерба, любой формы, исходя из содержания каталога или от неправильного использования, хранения или обращения, явно исключены. Договорные права и любые связанные требования базировались вслед за тем, независимо от формы, отдельного первоначально письменного соглашения, в особенности на основе наших общих условий продаж и поставок.

Все прежние утверждения теряют свою юридическую силу с публикацией данного каталога. Каталог не операционное руководство для использования и установки поршневых колец. Оно не содержит совета в юридическом смысле. Каталог не заменяет постоянно применимые технические инструкции – особенно при допусках – соглашения установки и обслуживания живания отдельного автопроизводителя. Кроме того, не возможно предсказать профессионализм тех, кто выполняет установку и ремонт.

Отдельные ссылки, сделанные в этом каталоге для установки и замены поршневых колец являются инструкциями исключительно для технически компетентного специалиста и должны быть проверены ими для их пригодности в каждом случае. Federal-Mogul не несет ответственность за ремонтные работы. Содержание каталога не предназначено, чтобы создавать или заменять любые договорные соглашения, которое должны быть сохранены исключительно к отдельному соглашению между 2мя сторонами, посредством чего продавец может быть только одним из юридических лиц Federal-Mogul как упомянуто на странице обратной стороны.

Сохраняется право, исправлять ошибки и изменения, особенно относительно к поправкам по деталям изготовителей двигателя и их условиям. Мы делаем все возможное, чтобы использовать новейшую информацию, однако, учитывая огромный ассортимент моделей автомобилей и двигателей на рынке, мы не можем гарантировать, что наша программа поставки продукции покрывает абсолютно все модификации двигателей. Кроме того, производители двигателей на этапе производства могут вносить в конструкцию изменения, о которых нам неизвестно или становится известно после опубликования информации в прессе. Поэтому мы не несем ответственность за точность информации в данном каталоге. Настоятельно рекомендуется перед установкой любой нашей продукции проверить пригодность детали из каталога для конкретного назначения. Чтобы помочь в этом, мы приводим спецификации материалов, использованных для производства, и размеры изделий. При возникновении сомнений обратитесь к изготовителю двигателя. Помните, что установка неподходящих запасных частей может привести к повреждению двигателя, за которое вы как ремонтное предприятие будете нести ответственность перед вашими клиентами.
